

Metal Reclamation Act

The government wishes to advise all Australians that steps are being taken to dramatically reduce metal consumption and ultimately to make Australia a metal free country

Already significant progress has been made in achieving this goal through government policies of selling of its gold reserves & greatly reducing mineral exploration in this big brown land through introduction of restrictive legislation, increased royalties & complete lack of funding, subsidies & incentives, such as are available to other primary producers.

This progress has gone very smoothly, due the coastal fringe mentality in Australia & lack of voting power by the mining fraternity. However, noble citizen, the time has come for all to contribute to this scheme & thus establish Australia as a world leader in non metal consumption.

Accordingly a framework has been established to recover & destroy all metal components of utilities by the year 2010.

Notice is hereby served that strike forces will commence such recovery on cars, trucks, homes & all buildings on January 1st 2005; so noble citizens are urged to complete metal replacement before this date. Gold teeth fillings & poker machines will be exempted from this program.

Thank you for your co-operation
Minister for the Superior
